Sydney Based **Developer**

---

Hi there,

I'm currently looking for a developer position in Sydney region.

I most recently worked as a developer for Tivo media platform at Xperi Inc. ( <https://en.wikipedia.org/wiki/Xperi> ), with a scrum team of thirteen cross culture experienced developers focused on the TV device settings and controls.

During my tenure in Xperi, I extended my knowledge in the application development process, leveraged my tech skillsets, such as Typescript, Javascript frameworks like an in house framework and Lit, Xstate, Rxjs, Git version control, Gitlab, pipeline testing Puppeteer, unit testing Jest, Docker, Linux, SASS etc.

Previously I had experiences on building real-world projects using React.js and Vue.js. My understanding of the whole web development life cycle has been deepened after using few javascript frameworks.

On top of Tv devices and software development experiences, my cross-industry background gives me the abilities to emphasise cross platform stakeholders throughout collaborations, and also to think out of the box when it comes to problem-solving.

Personally I'm an open-minded individual, always eager to learn something new. Don't be surprised to find me participating Sydney javascript developers meet-ups, getting involved with communities to help young people and women to learn coding.

Hope you find me with my skillsets and experiences has the potential to become a valuable asset to the engineer teams as I believe.

Looking forward to hearing your feedback.

Sincerely,  
Nicole
